

THE CHURCH OF THE PHANTOM LIBERTY

Building Design

For this project, I translated a musical composition into architecture, focusing on the abstract qualities of sound rather than lyrical meaning. The chosen piece evoked a strong contrast between rigid structure and rich ornamentation: a monumental, almost brutalist framework shaped by the music's steady progression, softened by the theatricality of its orchestral layers.

The resulting design became Church of the Phantom Liberty, a speculative religious structure situated within a fictional world. Baroque ornament was carved from a strict geometric volume, creating openings, chambers, and voids that transformed decoration into architecture. Through architecture, typography, and narrative, the project explored themes of authority, mystery, and belief, blurring the boundary between artefact and fiction.
